

How to resize a data volume

Resize a data volume

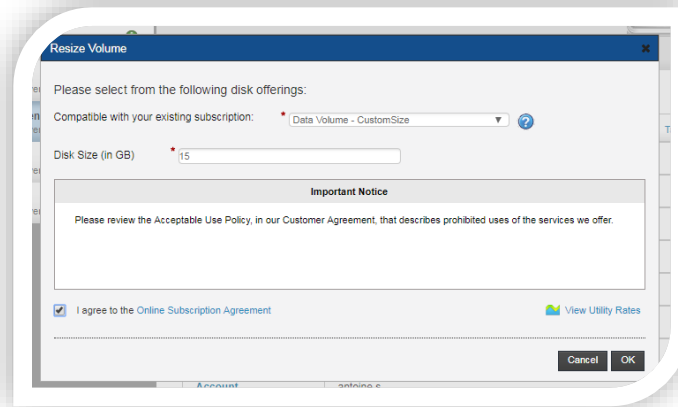

- From the GIOCloud Portal, click on the **My Services** tab located on the top horizontal menu
- Click on **Manage Resources**
- Click on the **Volumes** tab

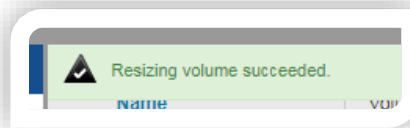

- Select your **data volume from the left menu**, click on the **gear icon**, and select **Resize Volume**

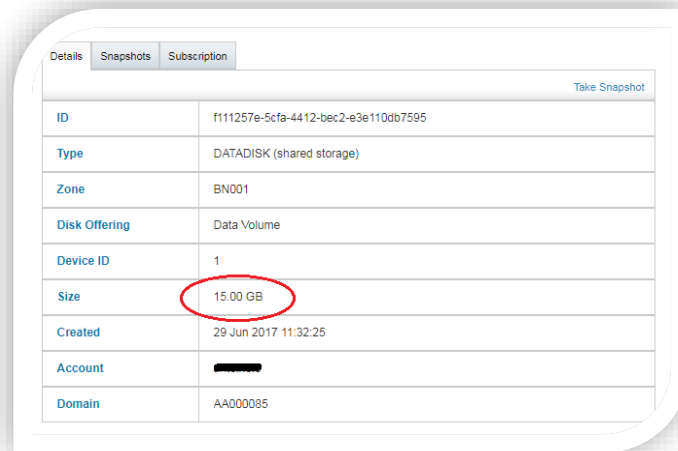

- On the popup window, choose the **new size**, agree to the **Online Subscription Agreement**, and click on **OK**. Note that you **cannot** downsize a data volume and that if a snapshot is still active on the VM it is attached to or on the volume, you **cannot** resize the volume data

- Wait for the **Resizing Volume Succeeded** message to appear

- The size of the new volume is now changed and you can see the new size in the details of the data volume

- Note that even though the volume has been resized correctly on the **GIOCloud portal**, additional steps need to be taken on the OS so that the new size can be seen from the operating system
