

How to remove, delete, or release a Public IP

Release a Public IP

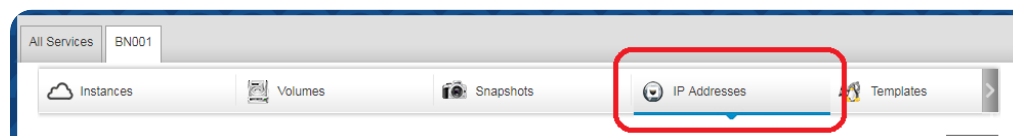

- Log in to the **Web Portal**, then click on the **GIOCloud Portal** menu

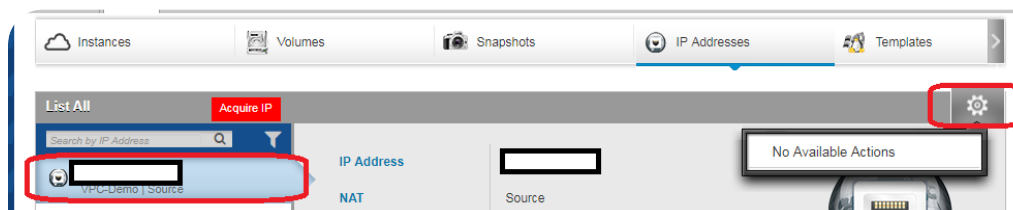

- Click on **My Services**, then **Manage Resources**

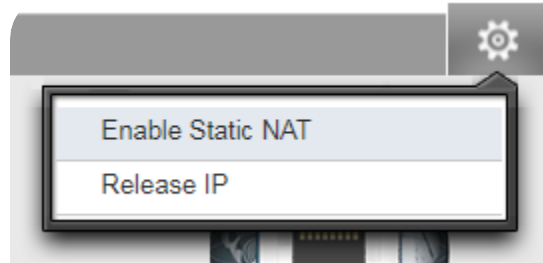

- Click on the **IP Addresses** tab

- Select the IP address that you want to release and click on the **gear icon**

- If there is **No Available Actions**, this means that the Public IP is still linked to a network. To release the public IP, you just need to delete the network that is linked to that public IP (the network may also be linked to other resources such as VMs). Deleting the network linked to the public IP will automatically release the public IP.
- If the **Release IP** option is available, click on it to release the public IP.

- Once release, you should get a confirmation message
